

iPrism 7.111 is a maintenance release that includes bug fixes and small enhancements.

This version of iPrism does not include an Antivirus option and is targeted for those customers who typically run their product without AV turned on. A robust Antivirus offering will be available in the 7.2 iPrism release.

## New Features

### Social Media Enhancements

- Yammer and LinkedIn posts are now supported and can be filtered.

### Central Management Enhancements

- iPrism version 7.111 can receive configuration data from a 1000g (version 7.160) master system in a Central Management environment.

### Request Access

- E-mail and Comments fields can now be required when submitting a Requesting Access form.

### Scheduled Recurring Reboots

- Scheduled recurring reboots can be configured via a Hotfix

## Bug Fixes from previous iPrism releases

iPrism 7.111 includes fixes to bugs reported in previous iPrism releases:

### Filtering:

- Many fixes to address problems where units would crash under heavy load, hang sporadically or cause interruptions to filtering.
- YouTube Education filtering has been improved to prevent circumvention

### Authentication:

- Many fixes to address issues where units would fail to authenticate users under heavy load.

### Reporting:

- Corrects issue where the Report Manager would fail to launch with a security error.

### Security:

- Hardens iPrism's NTP service against malicious attacks.

### High Availability:

- High Availability support has been made more robust.

### Miscellaneous:

- iPrisms with LCD screens have been corrected to make the display more readable.
- Emails generated from the iPrism and sent to the administrator now include the hostname of the iPrism in the From: field.

## Usage Notes

### Upgrade Path

- v7.111 is available by way of an upgrade for customers running iPrism versions 6.5x to 7.110.
- The following hotfixes are rolled into this release and no longer need to be active:
  - Hotfix 5-582: Corrects display issues with the LCD panel.

### Issues and Best Practices

- Backups
  - SMS restorations (backup and restore) can take up to 1 hour to repopulate the SMS features as you had originally set. The EdgeWave Technical Support team can assist you if you require a more immediate restoration.
- SMS
  - If a post is blocked in Yammer the page may not respond to further posts. This can be corrected by refreshing the Yammer page in your browser.
  - The following Ruleset Action Types are not functional: Delete, Save Draft, Tag and Update.
  - If the Action "Attach Message Stamp" is used, the configured message may appear twice on existing posts.
