

Overview

Release 11.3 contains support for DMARC and DKIM, feature enhancements and bug fixes.

New Features and Enhancements

- Support for outbound DKIM signing and inbound DMARC checking
- New Spoof Options section in the Administrator Dashboard domain and mailbox settings
 - Domain fuzzing, SPF, DKIM and DMARC all moved here
- EP-15347 Add ability to markup the subject of all delivered messages
- EP-15656 Bypass FDNS checking for outbound.protection.outlook.com
- EP-15781 Annotate message sent via Best Method of Delivery by the Encryption service to indicate it was sent using TLS.
- EP-15816 Separate the Download & Print controls for encryption users
- EP-15928 Add ability to disable SMTP and HTTPS protocols and ciphers on the Appliance dashboard.

Bug Fixes

- EP-15703 Attachment encryption PIN emails are not forced to use TLS
- EP-15704 Single character email address are causing error with Secure portal activation
- EP-15791 On the Personal dashboard the same domain can not be added to both the Friends and SPF exceptions lists
- EP-15794 Sender email address exception in anti-spoof does not bypass the domain fuzz protection
- EP-15838 In the Outbound IP DSN section the option to CC notifications to other recipients should be available when compliance filter notifications are enabled.
- EP-15866 User unable to view quarantined message from Advanced Report when recipient address contains an apostrophe.

API Changes

- EP-15604 List domain with account parameter is not working
- EP-15677 Allow API access to Delivered Messages report to Release/Redeliver emails.
